A **subsequence** of a string is a new string that is formed from the original string by deleting some (can be none) of the characters without disturbing the relative positions of the remaining characters. (i.e., "ace" is a subsequence of "abcde" while "aec" is not).

**Input:** s = "abc", t = "ahbgdc"  
**Output:** true

**Input:** s = "axc", t = "ahbgdc"  
**Output:** false

- $0 \leq s.length \leq 100$
- $0 \leq t.length \leq 10^4$
- $s$  and  $t$  consist only of lowercase English letters.
